COURSEWORK

Carnegie Mellon University

Cloud Computing; Client-Side Web Technologies; Data Structures for Application Programmers;
Introduction to Machine Learning(current); Fundamentals of Programming

PROJECTS

Travel Route Social Website

Mar 2016 - Apr 2016

- Designed, created and deployed a travel sharing web app based on Django MVC and SQLite database.
- Created the layout and elements of all the polished web pages using Bootstrap and jQuery framework.

Twitter User Data Analysis

Mar 2016 - Apr 2016

- Designed and created a cloud-based web application providing query services on a 1-TB-sized Twitter dataset.
- Designed and optimized MySQL and HBase database schemas for the back-end part of this web service.
- ETL the dataset using Amazon EMR based on Hadoop Streaming into the databases.

Contact Management Application

Mar 2016

- Created a contact management app with local storage to JSON file based on AngularJS.
- Implemented Google Maps API with AngularJS to show the location of that contact.

Cloud Storage System

Mar 2016

- Implemented the back-end of a cloud storage system providing storage and query of key-value pairs located on multiple areas.
- Applied replication and sharding strategies with MySQL and HBase databases for the cloud storage system.

Wikipedia Big Data Analysis

Jan 2016

- Analyzed a wikipedia JSON big data set using sequential programming with both bash and python.
- Obtained the required properties of the big data set by managing Amazon EMR.
